Health and Environment: We Strive for Their Betterment

Harpreet Singh, MDS, MBA, PGDCR¹ ¹ BJS Research Institute, The Baba Jaswant Singh Trust, Ludhiana, Punjab, India

Int J Health Environ Res 2023;1:1.

All what the humanity has evolved, the credit goes to nothing else, but the research work done by researchers all over the world, for all the years, tirelessly and relentlessly. With this firm belief in heart, Baba Jaswant Singh Ji laid the foundation of BJS Research Institute, under the umbrella of “The Baba Jaswant Singh Trust.” Under his academic and spiritual guidance, BJS Research Institute flourished with the commitment toward promotion of research in the field of health care and environmental sciences.

The main objective of our research institute has been the development of better medical facilities to alleviate human sufferings and pain, to make this world a better place to live in. The Baba Jaswant Singh Trust is a “Scientific and Industrial Research Organization (SIRO)”, recognized by Ministry of Science & Technology, Department of Scientific & Industrial Research, Govt of India since 1998. From the time of its inception and recognition, the institute has been striving toward the goal of achieving breakthroughs in developing new diagnostic and therapeutic technologies that would make the health care facilities more affordable to common man, thus benefitting the mankind at large.

The real purpose of a research institute is to increase the bank of knowledge available about specific issues as well as broaden the possibilities of how to utilize that knowledge to best advantage. Likewise, at our institute, our mission is to create new scientific knowledge and to enable its translation into improved health, more effective health services and products, thereby strengthening the health care system.

Our institute has always been dedicated toward protection of environment and has several projects in this direction. The efforts of our research institute are directed toward pursuing the collection and assimilation of data that has been helpful in understanding the impact of environmental changes on life on earth as well as discover ways to possibly reverse the negative factors. The global issues of water contamination and erroneous use of pesticides in agriculture have always been the top agenda of research projects of our institute and remarkable success has been achieved in these fields that has placed the name of BJS Research Institute on a global platform.

Our vision is to be a premier research organization, guided by principles of ethics and innovation. We intend to bring improvements to education, health, environment, and related areas. For materializing this noble vision, we visualize collaboration and partnerships with both local and global organizations, policymakers, and practitioners to adopt evidence-based practices. Moving ahead with all these intentions, we are committed to our motto of “Serving the humanity through science.”

BJS Research Institute, The Baba Jaswant Singh Trust, in totality is a multidisciplinary, interdisciplinary, and codisciplinary research institute and we invite each and every one interested in research, with open arms. With this objective, we are releasing the first issue of our journal “International Journal of Health, Environment and Research.”

At BJS Research Institute, we believe that “*Research has the power to change lives.*”
